

SMARTPORT

SMARTPORT

Smart and Sustainable Energy Port

The Project aims at promoting innovative practices and tools to reduce carbon emissions and improving energy efficiency in the public sector, in particular in port areas.

This will be possible thanks to the implementation of pilot actions and through promotion of better use of energy in the port areas.

Also, the Project aims to train energy managers to increase the skills of the P.A. in reducing energy waste and/or replacing the use of fossil fuels with renewable energy sources.
